Definition

- **Windows** is a Graphic user Interface GUI system, which is in between the computer and the user.
- It is called **Windows**, because it uses windows and small shapes called **Icons**.
- **Desktop** The desktop is the primary user interface of a computer. When you boot up your computer, the desktop is displayed once the startup process is complete. It includes the desktop background and icons or files and folders you may have saved to the desktop.
- **Icon** Icons are little pictures that represent different programs or saved items. Double-clicking on the icon accesses the information icons represent.

Definition

■ **Start Menu** In the lower left-hand corner of the Windows screen is the Start button. When you click on the button a menu will appear, which we will call the Start menu. This menu gives you access to all the different parts and functions of the computer.

■ **Task Bar** is an element of an operating system located at the bottom of the screen. It allows you to locate and launch programs through [Start](#) and the [Start menu](#), or view any program that's currently open.

Type of Windows

- **Any type of windows containing:**

1. Desktop and icons
2. Task bar
3. Start button
4. Programs

Start Up, Shut Down

Start Up : First of all, you will need to turn the computer on. Do this by pushing the power button on the front of the computer unit. The computer takes a few minutes to start up.

Shut down : is a term used to describe the process of closing all software programs in preparation to turn off a computers power

Using Windows

- Once you get to the Windows Desktop screen, here are some basic features you will see.

- One of the most important parts of your Desktop is the Taskbar. By default, it sits at the bottom of your screen giving you access to the Start Menu, several application icons, and the Notification Area.

Cont...

- In Windows 10, if an application is active or opened, you will see a green line below its icon. Clicking the icon will bring the application window up.
- Every open window features three buttons in the upper-right corner. These are used to minimize, maximize, or close the window

- **Minimizing means** that the window will hide in the Taskbar.

Cont...

- **Maximizing** will bring the window to a full-screen size.
- Windows can be moved around or resized as you please
- **To move a window**, just click on its Title Bar on the upper side of the window and drag it.
- **To resize a window**, move your mouse to any corner until you see a double-sided arrow. Then click and drag until you reach the desired size.

Cursor Types

- **Arrow**

- **Busy**

- **Text**

- **Double arrow**

- **Hand**

Using a Mouse

- Use the mouse to interact with items on your screen. You can move objects, open them, change them and moving pointer.
 - **Mouse does the following main jobs:**
- 
- ✓ **Clicking:** to position the pointer on an object, then quickly press and release the left mouse button.
 - ✓ **Double Click:** the left click is pressed and released quickly twice.
 - ✓ Double clicking used for opening windows and applications.
 - ✓ **Dragging and releasing:** This operation is used for moving files and folders from one place to another (e.g. My Computer).

How to Change the Icon Size

1. Right-click on an empty space on the desktop.
2. Select **View** from the contextual menu.

Desktop (Display) Personalize

1. Right-click on a free area on a desktop

- Here, on the right side, you can see the preview of the current desktop background. To change the wallpaper, under the Background drop-down menu, select the **Picture** option.

Change the color of your window borders

1. Right-click on a free area on a desktop.
2. Select Personalize.

Change Screen Saver

The image shows the Windows Settings application with the 'Lock screen' settings page. A callout labeled '1. Click on Lock Screen' points to the 'Lock screen' option in the left sidebar. The main content area shows the 'Lock screen' settings, including a preview of the lock screen, a 'Background' dropdown menu, and a 'Choose an image' section. A callout labeled '2. Then click on screen saver' points to the 'Screen saver settings' link at the bottom. A callout labeled '3. Select Screen saver mode' points to the 'Screen Saver' tab in the 'Screen Saver Settings' dialog box. A callout labeled '4. Select wait time' points to the 'Wait' dropdown menu in the dialog box. A callout labeled '5. Select Apply' points to the 'Apply' button in the dialog box. A callout labeled '6. Select OK' points to the 'OK' button in the dialog box. The 'Screen Saver Settings' dialog box is open, showing the 'Screen Saver' tab with a preview of a screen saver, a 'Wait' dropdown set to 1 minute, and an 'On resume, display logon screen' checkbox. The 'Power management' section is also visible, with a 'Change power settings' link. The Windows taskbar is at the bottom, showing the Start button, task view, and several pinned apps. The system tray shows the date and time as 12:03 PM on 10/29/2020.

5. Select Apply

6. Select OK

How to create new folder or file

1. Right-click on the desktop (or inside your folder) and choose New.
2. Choose Folder

Saving Files

- **Save** is a command in the File menu of most applications that stores the data back to the file and folder it originally came from.
- Use the keyboard shortcut key **Ctrl+S**
- The following shortcuts work in many programs, but not all.

Deleting Files Using the Recycle Bin

- When you delete a file from a window, the file is physically moved to the Recycle Bin.
- Once you choose to permanently delete an item, by emptying the Recycle Bin, you cannot restore it.

1. Using Context Menu – Right-clicking on the File or Folder
2. Using Keyboard Shortcut – *Delete* key
3. Using Keyboard Shortcut – *Shift + Delete* key
4. Drag & Drop to the Recycle Bin

Click on
Delete

Desktop Icon Settings

1. Right-click on a free area on a desktop
2. select Personalize

The screenshot shows the Windows Settings application with the 'Personalization' section selected. The 'Themes' option is highlighted in the left sidebar. A callout bubble labeled '3. Click on themes' points to the 'Themes' option. The 'Desktop Icon Settings' dialog box is open, showing a list of desktop icons with checkboxes: 'Computer', 'User's Files', 'Network', 'Recycle Bin', and 'Control Panel'. A callout bubble labeled '4. Desktop icon settings' points to the 'Desktop Icons' section. Below the list, there are icons for 'SHERWAN', 'Network', and 'Recycle Bin (full)'. A callout bubble labeled '5. Select which icon to show on desktop' points to the 'Recycle Bin (empty)' icon. At the bottom of the dialog, there are 'OK', 'Cancel', and 'Apply' buttons. A callout bubble labeled '6-select(ok)' points to the 'OK' button. The background shows a Windows 10 desktop with a taskbar at the bottom displaying various application icons and the system tray showing the time as 2:09 PM on 10/29/2020.

3. Click on themes

4. Desktop icon settings

5. Select which icon to show on desktop

6-select(ok)

Change desktop Icon picture

1. Right-click on a free area on a desktop
2. select Personalize

3. Click on themes

4. Desktop icon settings

5. Select any of the above icons

6. Select Textbox

7. Select which icon to show on desktop

8. select(ok)

Keyboard Shortcuts

- Most of the new Windows shortcuts use the Windows key () combined with other keys to perform several actions. The following are some of the most common or useful shortcuts used in Windows 10.

SHORTCUT	ACTION
Windows key 	Open the Start menu
Windows key  + S	Open the Windows Search
Windows key  + Tab	Open Task View
Windows key  + D	Show or Hide the Desktop
Windows key  + L	Lock your account
Windows key  + I	Open the Settings window
Windows key  + E	Open the File Explorer window
Windows key  + Print Screen	Takes a screenshot of your whole display and stores it in Pictures > Screenshots

Keyboard Shortcuts

- Other useful shortcuts allows you to automatically arrange your windows making it easier to work with multiple applications at the same time.

SHORTCUT	ACTION
Windows key  + Left arrow	Snap the active window on the left side of the screen
Windows key  + Right arrow	Snap the active window on the right side of the screen
Windows key  + Up arrow	Snap the active window on the top of the screen
Windows key  + Down arrow	Snap the active window on the bottom of the screen

- Although you can do this with your mouse by dragging the windows to each side of the screen, Windows 10 introduced shortcuts to perform this task.

Taskbar

- The Windows 10 taskbar sits at the bottom of the screen giving the user access to the Start Menu, as well as the icons of frequently used applications.
- On the right-side, the Taskbar features the Notification Area which informs the user of different things like the state of the Internet connection or the charge of the laptop battery.

Pin an Application to the Taskbar

- **Step 1** – Search for the application you want to pin in the Start Menu.
- **Step 2** – Right-click on the application.
- **Step 3** – Select “More” option at the top of the menu.
- **Step 4** – Select the “Pin to taskbar” option.

Unpin an Application from the Taskbar

- To “unpin” an application from the Taskbar just right-click the icon in the Taskbar and select “Unpin from taskbar” , You can “pin” it back again any time you want.

Notification Area

- The Notification Area is located at the right side of the Taskbar. It shows different types of notifications from your computer like your Internet connection, or the volume level
- At first, the Notification Area shows a limited amount of icons. But you can click the upward arrow on its left-side to see other icons as well.

Task View

- Task View allows you to quickly move within your open windows and applications.
- You can access it by clicking the “Task View” button from the Taskbar.

Flip

- You can use **Flip** to switch between open windows. To do this, press and hold the **Alt** key on your keyboard, then press the **Tab** key. Continue pressing the Tab key until the desired window is selected.

Cortana

- Cortana will help you find things in your computer, set appointments, answer questions, and many other things.
- To use Cortana simply type a question in the search box in the Taskbar, or click the microphone icon and talk to Cortana.

The icons on the left-side are for –

- Home
- Notebook
- Reminders
- Feedback

To add a new local user (without a Microsoft account):

1. Open the **Settings** app, then select **Accounts**
2. From the Account settings, click **Add someone else to this PC**.

To add a new local user (without a Microsoft account):

3. Select **The person I want to add doesn't have an email address..**

How will this person sign in?

Enter the email address of the person you want to add. If they use Xbox Live, Outlook.com, Windows, or OneDrive, enter the email address they use to sign in.

Email or phone

☐ The person I want to add doesn't have an email address

Next Back

To add a new local user (without a Microsoft account):

5. Enter an **account name**, then type the desired **password**. It's important to choose a strong password—in other words, one that is easy to remember but difficult for others to guess.

The screenshot shows the 'Create an account for this PC' window. At the top, the title is 'Create an account for this PC'. Below it, a message says: 'If you want to use a password, choose something that will be easy for you to remember but hard for others to guess.' The first section is 'Who's going to use this PC?' with a text box containing 'Sonya'. The second section is 'Make it secure.' with two password fields. The first password field has 8 dots. The second password field has 8 dots and a cursor, with a 'Show/Hide' icon (an eye) to its right. Below the password fields is a 'Password hint' text box. At the bottom right, there are two buttons: 'Back' (disabled, grey) and 'Next' (active, blue).

Create an account for this PC

If you want to use a password, choose something that will be easy for you to remember but hard for others to guess.

Who's going to use this PC?

Sonya

Make it secure.

Signing out and switching users

- If you're finished using your account, you can **sign out**. To do this, click the **Start** button, select the current account in the top-left corner, then choose **Sign out**. Other users will then be able to sign in from the lock screen.

Start Menu Parts

The Start menu for Windows 7 consists of many Parts.

- Use the Start menu to do these common activities:

1. Start programs
2. Open commonly used folders
3. Search for files, folders, and programs
4. Adjust computer settings
5. Get help with the Windows operating system
6. Turn off the computer
7. Log off from Windows or switch to a different user account

Cont...

Switch user: If you have more than one user account on your computer, Fast User Switching is an easy way for another person to log on to the computer without logging you off or closing your programs and files.

Log off: When you log off from Windows, all of the programs you were using are closed, but the computer is not turned off.

Lock: Locking your PC is a good option if you'll be back soon. You'll have to enter your password when you come back, which helps keep your work more secure.

Cont...

- **Restart:** The Restart button "reboots" your computer (it is sometimes called a "warm boot" or "soft boot.") That means it saves your information to the hard drive, turns off the computer for a moment, and then turns it back on again.
- **Sleep:** Clicking on Sleep puts your computer in a low-power state, but doesn't turn it off. The main advantage is that it allows you to get back to work quickly, without having to wait for the computer to do a full reboot

Cont...

- **Hibernate** : mode is very similar to sleep, but instead of saving your open documents and running applications to your **RAM**, it saves them to your **hard disk**. This allows your computer to turn off entirely, which means once your computer is in Hibernate mode, it uses zero power.

Difference between Sleep and Hibernate

- **Sleep** mode stores the documents and files you are operating into the **RAM**, using a small amount of power in the process.
- **Hibernate** mode essentially does the same thing, but saves the information to your **hard disk**, which allows your computer to be turned off completely and use no energy.

Table of Content

- What is Word Processing?
- Opening a Word processing Application.
- Closing a Word processing Application.
- Opening Recent & Exiting Document.
- Changing the number of documents in recent documents.
- Save as a document.
- Enhancing productivity.
- Document creation .
- Entering Text.
- Selecting and Editing Text.
- Window.
- Zoom.
- Minimize and Restoring Ribbon.
- Quick access bar.
- Home tab , Insert list , Page layout list.

What is Word Processing ?

Word processing: refers to the creation of documents using word processing software , such as **Microsoft Word**.

- Various type of document that can be created using word processing application:
 - a. **Letters.**
 - b. **Memos.**
 - c. **Posters.**
 - d. **Reports.**

Opening a word processing application:

1. Press the windows key on the keyboard

➤ Type Microsoft word

2. Double left click on the Microsoft word on desktop

3. Right click on desktop

➤ New

➤ Microsoft word

A Microsoft Word 2010 will open:

The screen layout will display the following:

1. the Quick Access Toolbar.
2. the ribbon.
3. the Tab.
4. A new blank document.

A Microsoft Word 2010 will open:

Closing a word processing Application:

To close Word, do the following :

1. Select the **File** menu.
 2. Select **Exit**.
- the word program will close

Closing a word processing Application:

- from close button

- Or from keyboard press **ALT + F4**

Closing Document:

- To close a document, do the following:
 1. file menu
 2. close
- Or press **CTRL + F4** from keyboard.

Note :if changes have been made to the file, a message will appear asking if you want to save the file before closing.

Click **save** to save the file.

Click **Don't Save** to close the file without saving.

Click **Cancel** to cancel the message and return to the word.

Opening a existing document:

- To open an existing document, do the following :
 1. File Menu
 2. open
 3. Select the location of the file to be opened
 4. Select the file
 5. Click open.

Note:press **CTRL+O** from keyboard.

Opening a Recent documents:

1. File menu
2. Recent

Changing the number of documents in recent documents:

1. File Menu
2. Option.
3. Advanced
4. Display section.
5. Adjust the number of recent documents that should display in the file menu.

Creating a New document:

1. File menu.
2. New
3. Blank Document.
4. Create

- Or press **CTRL + N** from keyboard.

Saving document in another file type:

Text format(*.txt):

- when a document is saved as a text file it loses all of its formatting features and graphics and saves in a format that enables it to be opened and viewed as text only.

Saving document in another file type:

1. File Menu.
2. Select save As
3. Select the correct drive/folder from the Navigation(folder)pane display it in the Address bar.
4. Enter a file name into the file name box.
5. Click the save as type arrow.
6. Select plain Text(*.txt).
7. Click save.

Rich Text Format (*.rtf)

- when a document is saved in **Rich Text** Format, it retains some of it's formatting and enables the document to be opened in different application, e.g. word processing or desktop publishing.

Rich Text Format (*.rtf)

1. file Menu.
2. save As menu option
3. Select the correct drive/folder from
4. The Navigation(folder)pane to display it in the Address Bar.
5. Enter a file name into the file name box and then click the save as type arrow.
6. Select Rich Text Format(*.rtf).
7. Click save.

Saving document in another file type:

Template:

Template contains standard content that will appear on all pages in a document

- File extension: .dotx
- Location: if u didn't give it a location it saves in the following location:

C:\Users\username\AppData\Roaming\Microsoft\Templates.

How to save a Template:

1. File menu.
 2. save as
- The save as windows opens

1. Select the correct driver/folder
2. Enter a file name into the file name box and ensure that the file name is correct
3. save as type box displays word template.
4. Click save.

Saving document in another file type:

PDF:

PDF stands for the **Portable Document Format**, used to display documents in an electronic form independent of the software, hardware or operating system they are viewed on.

Saving document in another file type:

1. file Menu.
2. save As
3. Select the correct drive/folder from the Navigation(folder)pane display it in the Address bar.
4. Enter a file name into the file name box.
5. Click the save as type arrow.
6. Select PDF.
7. Click save.

Saving document in another file type:

Version Number:

- To save the document with a different version number, do the following.
 1. file menu.
 2. save As .
 3. Select the correct drive/folder from the Navigation(folder)pane.
 4. Enter a file name into the file name box.
 5. Click the save as type arrow.
 6. Click save.

Enhancing productivity:

Productivity can be increased by setting users preferences, such as adding a user name and/or creating a default folder to save all documents.

➤ To set user preferences, do the following: User Name

1. file menu
2. option
3. General
4. Enter new
5. user name and click ok.

Default file Location to open Files from and save files To:

1. File menu.
2. Option.
3. Save.
4. Default file location.
5. Ok.

Default file Location to open Files from and save files To:

Using the help function:

the help function is available to give advice and help on the application you are using . This is useful when you are trying to perform an action and don't know how to proceed.

To open Help Window:
Press **F1**

Document Creation:

- Text is entered into a new document by using the keyboard.
- The text is appears in the cursor position as it is entered.
- The **Enter** key is used to create a new paragraph.
- A document may contain multiple pages.

Entering Text

- Text refers to characters, words or symbols entered into a document using keyboard.
- Cursor is the black vertical flashing line on the page

Font Style

Subscript: is the text or number which is placed below the main line of text or number.

Superscript: is the text or number which is placed above the main line of text or number.

How to change selected text with Text Effects:

1-From the Home Tab, find the Font toolbox.

- You can apply visual effects such as outline, shadow, reflection, and glow by clicking the  icon. This will bring up the Text Effects menu and several styles to consider.

- It is also possible to modify the outline, shadow, reflection, and glow settings by selecting those items.

How to highlight text

- From the Home Tab, find the Font toolbox.
- If you would like a different highlighter color, select the drop down menu to the right of the icon and select the color of your choice.

Working with Bulleted

❖ Change the bullet character or number style

1. Select the paragraph(s)
2. Home tab
3. Paragraph group
4. click the Bullets
3. Select a style from the gallery.

Working with Numbered List

- Change the bullet character or number style

1. Select the paragraph(s)
2. Home tab
3. Paragraph group
4. click the numbering
3. Select a style from the gallery.

Formatting Paragraph

1. Select paragraphs
 2. Home tab
 3. paragraph group
 4. click **Align left**, **Center**, **Align Right**, or **Justify** button.
- **Line spacing**: is used to adjust the line spacing of paragraphs.

Align Left <Ctrl> + <L>

Align Center <Ctrl> + <E>

Align Right <Ctrl> + <R>

Justify <Ctrl> + <J>

How to create a Multilevel-List

- From the Home Tab, find the Paragraph toolbox.

- Click the multilevel-list icon in the Paragraph group.

How to increase or decrease the indent of a paragraph

1. From the Home Tab, find the Paragraph toolbox.
2. Select the text that you would like to increase the indentation of.
3. Click either the increase or decrease indent button.

How to sort items in a list with one click

- From the Home Tab, find the Paragraph toolbox.
- Select the text that you would like to alphabetize or put in numbered order.
- Click the Sort icon. Then select how you would like to sort the items.
- click ok

How to see paragraph marks and hidden formatting symbols

1. From the Home Tab, find the Paragraph toolbox.
2. Click the Show/Hide paragraph and formatting symbols button.
3. To turn it off, click the button again.

How to change the fill color of objects on the page (not text objects)

1. From the Home Tab, find the Paragraph toolbox.
2. Click the shape that you would like to change the fill color of.
3. Click the paint bucket button and then select the color of your choice.

How to fill in the borders of tables

- From the Home Tab, find the Paragraph toolbox.
- Select the cell of a table that you would like to
- add a border to.
- Click the border line that you would like
- the cell(s) of your table to have filled in.
